March 2, 2004

To the members of ISO TC 197,

On behalf of the members of Working Group 9, I am delighted to present for your consideration the Committee Draft proposal of the ISO standard: Gaseous hydrogen – Hydrogen generators using fuel processing technologies – Safety.

The priority of the Working Group 9 members has been to develop a product safety standard suitable for conformity assessment.

The Working Group 9 members have agreed to start working on a performance standard as soon as the safety document has been approved as CD.

Working Group 9 has prepared this document in roughly a year. In this opportunity I would like to thank the 31 members and the secretary of Working Group 9 for their high level of commitment, their intense work and their open and friendly cooperation that have made possible this accomplishment.

Working Group 9 intends to meet in Japan at the end of June to discuss the ISO TC 197 comments. The exact meeting date and location will be communicated as soon as available.

Kind regards,

Mario Sandoval
Convener Working Group 9
