

Results of the circulation of the first committee draft ISO/CD 16110 *Hydrogen generators using fuel processing technologies*

Dear members,

Please find enclosed the comments received on the first committee draft **ISO/CD 16110** *Hydrogen generators using fuel processing technologies*, which was circulated as ISO/TC 197 doc. **N 276**. The comments received (see Annex 1) will be returned to ISO/TC 197 WG 9 for their consideration. They will be discussed at the next ISO/TC 197 WG 9 meeting on 30 June and 1 July 2004 in Yokohama, Japan.

Regarding the WG 9 approach to break down the standard in two parts, only Argentina, Canada, the Netherlands and Norway have provided their comments (see Annex 2). We therefore propose that P-members prepare themselves to have a discussion on this topic at the next ISO/TC 197 plenary meeting.

For your information, WG 9 recommends that the scope of this CD be limited to the safety requirements applicable to hydrogen generators using fuel processing technologies. The performance aspects would be defined by ISO/TC 197 WG 9 after this CD is approved and incorporated in a separate part of the standard as follows:

- ISO 16110-1: Hydrogen generators using fuel processing technologies — Part 1: Safety
- ISO 16110-2: Hydrogen generators using fuel processing technologies — Part 2: Performance

Yours sincerely,

Sylvie Gingras, Secretary of ISO/TC197
Bureau de normalisation du Québec
on behalf of the Standards Council of Canada

Enclosure (Annexes 1 and 2)
