**TAB Recommendation: NWIP from Japan “Gaseous hydrogen --
Fuelling stations – Dispensers”**

Following a review and some minor modifications to this NWIP submitted by Japan, ISO/TC 197 Technical Advisory Board (TAB) recommends the following to the P-Members:

- Approval of the scope and the NWIP on dispensers;
- Approval of Dr. Shogo Watanabe as the Convener for this NWIP.

Rationale:

As stated by Craig Webster
ISO/TC 197 Technical Program Director (TPD) for Components and Vehicular Applications

“Dispensers are very complex assemblies composed of various components that must function together to safely fuel a vehicle. There is a need to ensure dispenser systems function in a uniform manner, to provide confidence to users, and confidence to the government agencies that will be responsible for certifying the accuracy of dispenser fueling measurement systems.”
