TAB Recommendation: NWIP from U.S. “Gaseous hydrogen – Fuelling Stations – Hoses”

Following review and consultation with the proposer that led to improvements to this NWIP submitted by the U.S., the ISO/TC 197 Technical Advisory Board (TAB) recommends the following to the P-Members:

- Approval of the scope and the NWIP on hoses for fueling stations;
- Approval of Peter Ehlers, Program Manager for alternative energy standards development at CSA Group, as the Convener for this NWIP.

Rationale:

As stated by Craig Webster
ISO/TC 197 Technical Program Director (TPD) for Components and Vehicular Applications

“Through personal experience with the limited life of hoses used for the fueling of vehicles, and failure investigations of fueling hoses used for CNG service, a standard is required to ensure consistency across the marketplace. The fact that the CSA is developing HGV4.2 for hydrogen hoses based on NGV4.2 for CNG hoses, shows that there is already industry support.”
